

AVG Internet Security SBS Edition

Centrally controlled comprehensive protection
for networks and e-mail servers.

Key Technologies

-  **Anti-Virus** (against viruses, worms and Trojans)
-  **Anti-Spyware** (against spyware, adware and identity-theft)
-  **Remote Administration** (allows central AVG administration of all computers on the network)
-  **File server, E-mail server and SharePoint portal protection**

Key Technologies (workstations)

-  **Anti-Rootkit** (against hidden threats – rootkits)

New Safe Surf and Search

AVG's unique Active Surf-Shield and Search-Shield protect you in real time against malicious web pages, zero day exploits and drive-by downloads. Other programs rely on static databases and cannot protect you at the only time that matters – the time you click on a link. When you search using Google, Yahoo, or MSN, if the results include websites that contains malicious code, AVG simply blocks the page so you can't accidentally infect your system. Other questionable or suspicious sites are flagged with an alert to show you the degree of risk of the page.

Tough on threats

- Blocks poisoned web pages in real time
- Detects and removes viruses, spyware, rootkits, worms and Trojans
- Protects against exploits and drive-by downloads that invisibly and automatically download dangerous content to your computer without your consent or knowledge while you are surfing the Internet
- Prevents the opening of suspect files
- Automatically heals or removes infections

Recommended System Requirements

Intel Pentium, 1,2 GHz, 70 MB free hard drive space (for installation), 256 MB RAM

Supported platforms

Windows 2000/XP(32/64 bit)/Vista(32/64 bit)
